

— EDITION 27

The War for the Product Query Endpoint

Google isn't trying to build a better shopping application. They are building a system that allows LLMs to query every checkout line on the internet.

A 6-part breakdown

SWIPE >>>>

0101 / 06

The War for the Product Query Endpoint.

The foundational search engine battlefield is shifting. As consumers move from typing keywords into browsers to asking AI assistants to find solutions, the core discoverability engine is transforming.

0202 / 06

| How Universal Protocols Unify Product Metadata.

Emerging machine commerce standards format e-commerce inventory, pricing data, and checkout parameters into clean structured feeds optimized for LLM consumption.

0303 / 06

The Death of Proprietary Merchant Cart Silos.

Traditional online stores spend heavily to keep consumers locked inside their custom frontend designs. Universal machine protocols allow AI agents to purchase inventory directly from raw backend databases.

0404 / 06

Why Open Connectivity Wins Over Closed Networks.

Closed corporate digital marketplaces limit machine efficiency. Open, standardized protocols allow any independent merchant to list inventory directly to global AI procurement agents.

0505 / 06

How Brands Must Format Commercial Data.

To survive the transition, companies must stop focusing exclusively on eye-catching web content and aggressively publish clean, machine-accessible product APIs.

0606 / 06

Save This: Get Your Catalog Agent-Ready.

1) Publish clean, machine-readable product APIs — inventory, pricing, checkout parameters. 2) Adopt emerging universal commerce protocols. 3) Stop investing only in human-facing storefronts. 4) Open beats closed: any merchant can list directly to *global AI procurement agents*.

— THE TAKEAWAY

Is your catalog queryable?

Comment whether an LLM could buy from you today. Repost to share it, and follow for daily agentic payments breakdowns.
