

— EDITION 04

Business-to-Agent (B2A): The New Economy

The first trillion-dollar AI enterprise won't have a single human customer. Welcome to the Business-to-Agent economy.

A 6-part breakdown

SWIPE >>>>

0101 / 06

Move Over B2B. B2A Is Here.

We have spent decades building for Business-to-Consumer (B2C) and Business-to-Business (B2B). The fastest-growing demographic of economic buyers is now software agents.

0202 / 06

| When Agents Hire Other Agents.

An AI developer agent encounters a complex data problem. Instead of alerting a human, it programmatically subcontracts a specialized data-cleaning agent, paying it a fraction of a cent instantly.

0303 / 06

The Micro-Transaction Explosion.

Humans purchase in large chunks. AI agents purchase continuously in tiny micro-amounts —paying fractions of a penny per token, API call, or compute cycle.

0404 / 06

The Autonomous Supply Chain.

Procurement is shifting from quarterly human reviews to real-time machine balancing.

Inventory levels, cloud computing nodes, and logistics routes are bought and sold fluidly by algorithms.

0505 / 06

Why Traditional Invoicing is Functionally Obsolete.

Net-30 payment terms and manual PDF invoice processing make no sense when transactions happen 50 times per second. Settlement must happen concurrently with execution.

0606 / 06

How to Price Software for a Machine Buyer.

If your SaaS model relies on seat-based licensing, you are built for an old era. Winners must shift toward pure consumption-based pricing optimized for machine API usage.

— THE TAKEAWAY
